Template for Cloudbuster

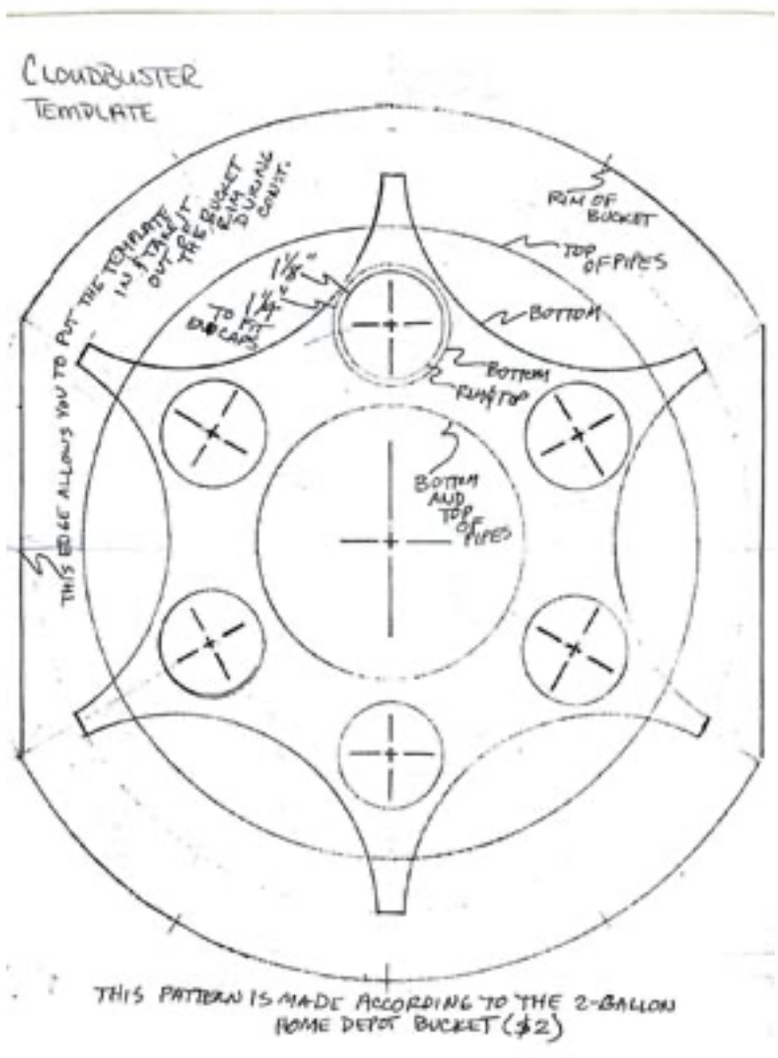
The following image was created by Don Croft to describe the construction of the three wood templates required for a cloudbuster.

If you have Adobe Photoshop, please download the **TEMPLATE.JPEG** format and the image will print out at the correct scale. (That is, DON'T click on with the left button. Click on the right button and save the file/target onto your computer. Then open up Photoshop, and open up the file in photoshop).

If you DO NOT have Adobe Photoshop, then download the free Adobe Acrobat Reader and download the **TEMPLATE.PDF**. (Again, click on with the RIGHT button and save it onto your computer). When using Adobe Acrobat reader to view and print this image, the scale will be slightly off (No, I don't know why). The diameter of the widest circle is supposed to be 9 and 1/8 inches. The PDF printout will only be 8 and 14/16. Use a copy machine and enlarge the PDF printout until it is the correct scale.

Make three copies, one for each size wood template.

TEMPLATE.JPG **TEMPLATE.PDF**



DO NOT USE THIS IMAGE - FOR ILLUSTRATION ONLY

If you can't do any of the above, Michelle Ridgley will mail you a set containing all three templates if you do the following:

a) If you live in the USA: Send a stamped self-addressed envelope and $2 -

b) If you live outside the USA: Send a US $5 bill -
